

OE-Premium™ Heavy Duty Radiators for Freightliner Century & Columbia Trucks

Extra Strength Where It's Needed Most!

Our approach is simple. We've tested OE Freightliner Century and Columbia radiators. We identified every failure point. Then we engineered a solution for each and every one of those failure points. The result – OE-Premium™ radiators – guaranteed fit and performance, **plus some proprietary value-added features.**

Headers: Tabbed headers made of high-strength, high-temperature age-hardening aluminum alloys that provide longer service life.

Side Channels: Side channels protruded through both headers of the core forming a "uni-body" like construction to reduce twisting and flexing.

Tanks: Heavy-gauge tanks plus extra reinforcement built-in behind the hose connection.

Cores: Brazed aluminum cores with heavy-wall tubes and heavy-gauge fins for optimal columnar strength.

Testing: While most manufacturers cycle-test truck radiators at 30,000-50,000 cycles, **every one of our OE-Premium™ radiators has passed 250,000 cycles!**
